OPE-003 - Use consistent processes (e.g. checklist) to assess deployment readiness

In the same service a QA environment is configured, which is used for development, testing and presentation scenarios to future users of the tool.

The databases used for each of the environments mentioned above are separated in order to ensure the integrity and security of the information.

As good practices, the client has been recommended to implement a Test environment and/or develop DevOps in the Organization to achieve a comprehensive development on the platform.
