COST-001 - Develop total cost of ownership analysis or cost modelling

An initial cost estimate is made at the beginning of the project for the client to review the financial feasibility of moving its workloads to AWS

AWS Calculator

https://calculator.aws/#/estimate?id=78cccb0908e0a965285c91341ddab047107fc693

It is exported to a .csv file for presentation, sending to the customer, and approval.

The estimation is made with the on-demand cost model to later be able to monitor the use of the different components, execute optimization and evaluate the acquisition of Saving s Plan or reserves for cost savings.
